

QUESTION	ANSWER
<b>Is an underground car park allowed?</b>	Considering the geological conditions of the competition territory, it is not advisable to build an underground car park.
<b>How freely can we divide the particular spaces into levels/floors? For the tower to be about 50 m high, there either should be the "empty" floors or the indicated 100 square meters on the floor should be divided into more levels.</b>	The Design Programme indicates the functional placement of the rooms by levels. In the body of the ATC tower (5 upper floors) it is essential to adhere to the requirements of the Designing Programme, while the administrative wing is at the authors' discretion.
<b>Do we have to stick strictly to the proposed location point 3a of the tower? Can we choose another location within the competition territory?</b>	The coordinates indicated in Appendix "4_1_4_DFS_pre-project_study_Riga_tower" to the Competition Brief for the location of the air traffic control tower (3a and 3b) are given in accordance with the photo fixation done by drone and the analysis of the respective angles of visibility. The Participants can choose any other location of the ATC tower within the competition project territory existing parking lot, justifying the choice of the location.
